**20apps**

The scatter plot displays data points for two series: blue circles and orange circles. The blue series forms a dense, downward-sloping curve from the top-left to the bottom-right. The orange series consists of several points, mostly clustered at the top-left and bottom-right, with a few scattered in the middle. A red 'x' is located in the middle-left area, and a black star is located near the center of the blue curve.
