

**Generation 4**

**50nodes**  
**20apps**

The scatter plot displays two data series: '50nodes' represented by blue dots and '20apps' represented by orange dots. The blue dots are more numerous and form a dense, elongated cluster that trends from the upper-left towards the lower-right. The orange dots are fewer in number and are scattered, with a notable concentration in the upper-left area and a few isolated points further down and to the right. A red 'x' is located in the upper-left quadrant, above the main cluster of blue dots. A black star is positioned within the cluster of orange dots, near the center of the plot.
